## DETAILED ACTION

### *Drawings*

1. Figures 1A and 1B should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 8, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Hoover et al. (4,910,420).

Regarding claim 1, Hoover et al. shows a seat (Figure 3) for mounting a motor controller (108) for a heat-dissipating device (54) having a base (84), comprising a main body (98) mounting on the base (84) of the heat-dissipating device and having a slot (near 116) to secure the motor controller.

Regarding claim 8, Hoover et al. also shows a heat-dissipating device, comprising:

- A base (84);
- A stator (72) disposed on the base;
- A rotor (54) surrounding the stator and coupled to the stator;
- A motor controller (108) driving and controlling the heat- dissipating device;
- and
- A seat (110) mounted on the base (with 96 to 98) and having a slot (near 116) to secure the motor controller.

Regarding claim 17, Hoover et al. also shows a heat-dissipating device, comprising:

- A base (84);
- A stator (72) disposed on the base;
- A rotor (54) surrounding the stator and coupled to the stator;
- A motor controller (108) driving and controlling the heat- dissipating device;
- and
- A seat (110) mounted on the stator (with 104 to 148) and having a slot (near 116) to secure the motor controller.

4. Claims 1-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Doemen et al. (4,482,849).

Regarding claim 1, Doemen et al. shows a seat (Figures 1, 5, 6, 8 and 9) for mounting a motor controller (30, 59) for a heat-dissipating device (40) having a base

Art Unit: 2834

(28), comprising a main body (65) mounting on the base (28) of the heat-dissipating device and having a slot (62) to secure the motor controller.

Regarding claim 8, Doemen et al. also shows a heat-dissipating device, comprising:

- A base (28);
- A stator (10) disposed on the base;
- A rotor (40) surrounding the stator and coupled to the stator;
- A motor controller (30, 59) driving and controlling the heat- dissipating device;
- and
- A seat (54) mounted on the base (56) and having a slot (62) to secure the motor controller.

Regarding claim 17, Doemen et al. also shows a heat-dissipating device, comprising:

- A base (28);
- A stator (10) disposed on the base;
- A rotor (40) surrounding the stator and coupled to the stator;
- A motor controller (30, 59) driving and controlling the heat- dissipating device;
- and
- A seat (54) mounted on the stator (through pins 15, 17 and base 28) and having a slot (62) to secure the motor controller.

Regarding claims 2-7, 9-16, and 18-23, it is noted that Doemen et al. also shows all of the limitations of the claimed invention.
